Mobile phones are NOT allowed in the examination room.

MULTIPLE CHOICE QUESTION PAPER

Duration: One and a Half Hours

INSTRUCTIONS TO CANDIDATES

Read the following instructions carefully before you start answering the questions in this paper. Make sure you have a soft HB pencil and an eraser for this examination.

1. USE A SOFT HB PENCIL THROUGHOUT THE EXAMINATION.
2. DO NOT OPEN THIS BOOKLET UNTIL YOU ARE TOLD TO DO SO.

Before the examination begins:

3. Check that this question booklet is headed "**0796 Information and Communication Technologies 1**"
4. Fill in the information required in the spaces provided above.
5. Fill in the information required in the spaces provided on the answer sheet using your HB pencil: **Candidate Name, Exam Session, Subject Code and Candidate Identification Number.** Take care that you do not crease or fold the answer sheet or make any marks on it other than those asked for in these instructions.

How to answer the questions in this examination

6. Answer **ALL** the **50** questions in this Examination. All questions carry equal marks.
7. **Electronics calculators are not allowed**
8. Each question has FOUR suggested answers: **A, B, C** and **D**. Decide which answer is appropriate. Find the number of the question on the Answer Sheet and draw a horizontal line across the letter to join the square brackets for the answer you have chosen.

   For example, if **C** is your correct answer, mark **C** as shown below:

   [A] [B] ~~[C]~~ [D]

9. Mark only one answer for each question. If you mark more than one answer, you will score a zero for that question. If you change your mind about an answer, erase the first mark carefully, then mark your new answer.
10. Avoid spending too much time on any one question. If you find a question difficult, move on to the next question. You can come back to this question later.
11. Do all rough work in this booklet using the blank spaces in the question booklet.
12. **At the end of the examination, the invigilator shall collect the answer sheet first and then the question booklet. DO NOT ATTEMPT TO LEAVE THE EXAMINATION HALL WITH IT.**

GCE Questions at www.meetlearn.com

1. The size of the monitor is determined by the ___ of the monitor.
   A vertical length
   B horizontal length
   C diagonal length
   D Vertical plus horizontal length

2. Which of the following does not influence the processing ability of a computer?
   A Local disk size
   B Bus size
   C Cache size
   D RAM size

3. A professional who gives advice on the set up of computers in a room is a/an
   A database administrator
   B ergonomist
   C maintenance technician
   D system analyst

4. A system that can track the movement of animals in a forest area is
   A animal control system
   B knowledge based system
   C geographic information system
   D control system

5. The security measure that converts information to unreadable form is
   A coding
   B encryption
   C bugging
   D deciphering

6. The i7 laptop that is mostly used today by students is classified as _____ computer.
   A 5th generation
   B 4th generation
   C 3rd generation
   D 2nd generation

7. An office door that is opened through eye scan is said to use
   A automatic system
   B biometric system
   C artificial intelligence
   D CT scan

8. The act of modifying data from a remote position without authorization is known as
   A phishing
   B hacking
   C network logging
   D scamming

9. Which of the following does not imply the presence of a virus in a computer?
   A Special software
   B The speed of the computer
   C The virus activities
   D File extension

10. Computer performance can be improved by:
   A defragmentation
   B file deletion
   C hard disk upgrade
   D ROM upgrade

11. The probable need for a computer that cannot output sound is
   A encoder
   B volume
   C players
   D drivers

12. The quality of images in the computer can be improved by
   A using a larger monitor
   B changing the graphic card
   C increasing the brightness
   D increasing the RAM chips

13. The network in which signals are made to move in one direction is the
   A bus
   B ring
   C mesh
   D round robin

14. The unit in a CPU that performs binary operations is
   A accumulator
   B control unit
   C arithmetic and logical unit
   D input / output unit

15. Signal interference in data transmission is reduced by
   A twisting of cable
   B burying of cable on the ground
   C using many ports
   D using only coaxial cables.

16. The amount of data that flows in a network medium at a given time is defined by the
   A switch
   B server
   C bandwidth
   D cable.

17. Systems that collect data over a period of time before processing is done are known as
   A piece meal systems
   B time sharing system
   C group systems
   D batch systems

18. The organization of files in the local storage of a computer is carried out by the
   A operating system
   B central processing unit
   C file manager
   D windows explorer

GCE Questions at www.meetlearn.com

19. A DBMS is classified as a/an
   A specialised software
   B generic software
   C system software
   D application software

20. Instructions from the local storage get to the central processing unit through the
   A operating system
   B random access memory
   C registers
   D buffer

21. Which of the following text editor is suitable for programming?
   A Notepad
   B Firefox
   C MS Word
   D Pelles C

22. A programming language structured data type whose items can be accessed by an index.
   A Records
   B Array
   C Files
   D Sets

23. A feature in e-mail accounts that keeps unwanted mails coming from particular persons is
   A spam
   B filter
   C cookies
   D mailer daemon

24. A development strategy in which the final product is constructed from a model is
   A prototyping
   B modelling
   C SDLC
   D simulation

25. The steps on how to solve a problem are clearly stated. This programming paradigm is known as
   A Functional paradigm
   B Imperative paradigm
   C Declarative paradigm
   D Object-oriented paradigm

26. A technique that results to independent sub programs that can work together to solve a problem is
   A stepwise refinement
   B Modular programming
   C bottom-up approach
   D top-down approach

27. A typical encryption algorithm makes use of
   A hash functions
   B cryptic functions
   C recursive functions
   D iterative functions

28. The network configuration is done at the
   A server
   B switch
   C backbone
   D router.

29. The function of a modem is to
   A select transmission path
   B increase transmission speed
   C inter connect devices
   D reduce interference

30. Transmitted data in a network is secured by
   A binary coding
   B compression
   C encryption
   D masquerading

31. The abstract data type that is defined by the head and a tail is the
   A stack
   B queue
   C binary tree
   D list

32. A sign showing that the printer is effectively connected to a computer is
   A buffering
   B polling
   C hand-shaking
   D interrupt

33. The Internet stores information in
   A routers
   B atmosphere
   C servers
   D hard disks

34. The best cable transmission medium for broadband communication is
   A shielded twisted pair
   B coaxial cable
   C fibre optics cable
   D unshielded twisted pair

35. The physical layout on how devices are connected in a network is called
   A network connection.
   B network configurations
   C network topology
   D digital network layout

36. An HTML script can be displayed to the user with the help of
   A a compiler
   B an interpreter
   C a browser
   D an assembler

37. A network cable is connected to a computer through
   A motherboard
   B ethernet cable
   C PS/2 interphase
   D RJ45 interphase

38. The role of a gateway in a network is to
   A control traffic between networks
   B selects the best path for network packets
   C boosts the strength of signals to cover long distances
   D receive and sends signals only to requesting computers in a network

39. In HTML, the tags <ul> ---- </ul> are used to
   A underline text
   B create numbered list
   C create bulleted list
   D create ordered paragraph

40. If the 1st character in the ASCII code is 00000001, then the code of the 74th character is
   A 1001 0010
   B 0100 1010
   C 0010 0110
   D 1100 0010

41. The meaning of instructions in the machine cycle can be derived at the _____ phase?
   A Fetch
   B Decode
   C Execute
   D Process

42. Which of the following is NOT a good characteristic of an algorithm?
   A It must be executable
   B It must be indefinite
   C It must be unambiguous
   D It must have a beginning and end

43. The function defined as F(n)=F(n-1)+F(1) is described in programming as
   A routine
   B procedure
   C looping
   D recursion

44. A code that cannot be modified by the programmer that is only executable by the machine is
   A not yet compiled
   B Object code
   C known as a pseudocode
   D an error code

45. Which of these is a specific advantage of object-oriented programming?
   A Secured codes
   B Reusable codes
   C Execute faster
   D Run on many machines

46. The series of tasks that gives the shortest time that the project can be completed is known as
   A critical path
   B deliverable tasks
   C deadline tasks
   D determinant path

47. Which of the following is an activity in the design phase of SDLC?
   A Find the weakness of the system
   B Create test data
   C Write codes
   D Test the system

48. One cause of repetitive stress injury is:
   A use of LCD monitors
   B use of bad tables
   C long eye contact with the monitor
   D typing for long period

49. The system that is used to manage database is:
   A data sheet
   B relational database
   C DBMS
   D SQL

50. To avoid redundancy in a large database,
   A delete repeated data
   B use only one table
   C use many tables to store data
   D use tables with not more than 5 fields
